# Getting Started with the Arduino MKR GSM 1400

The [Arduino MKR GSM 1400](#) is a learning and development board which contains the [ATMEL SAMD21](#) micro controller, designed to integrate the core's low power-consumption and high performance with the Arduino's ease-of-use. The MKR GSM 1400 brings the [Arduino Zero](#) functionalities in the smaller form factor established by the [Arduino MKR1000](#) adding the GSM (2G and 3G) connectivity to the Arduino platform.

The Arduino MKR GSM 1400 is programmed using the [Arduino Software \(IDE\)](#), our Integrated Development Environment common to all our boards and running both [online](#) and offline. For more information on how to get started with the Arduino Software visit the [Getting Started page](#).
