```
void connectWiFi() {
   while (status != WL_CONNECTED) {
     status = WiFi.begin(wifi_ssid, wifi_password);
     delay(3000); // wait 3 seconds
   }
   printWiFiStatus();
}
```

```
void loop() {
  mqtt.loop();
  if (!mqtt.connected()) {
    connectMQTT();
  if (millis() - lastMillis > publishInterval) {
    lastMillis = millis();
    float temperature = dht.readTemperature(true);
    float humidity = dht.readHumidity();
```
